ATI Snow Plough

A quiet winter servicing vehicle reducing the challenges of snow of hotels and public walkways.

It is a constant challenge for hotels and resorts to keep public walkways free of snow without disturbing their guests with noisy machinery. The ATI Snow Plough is operated fully electrically with 2 powerful electric engines and is equipped with sufficient battery power in order to operate for 3-4 hours. The loading platform can carry grit in order to keep the cleaned space free of snow. In off-seasons, the ATI Snow Plough can be used as a transport vehicle by removing the snow plough device in the front of the vehicle.

Technical datasheet

Motors	2 DC motors, nominal output 1,1 KW each	Climbing capacity	Approx. 20%
Gearbox	Self-impeding worm gearing	Weight	Weight empty 200 kg, max. payload 200 kg
Brakes	Electromechanical brake system – via worm gearing	Wheel size	16 x 6.50-6
Steering	Tank steering by means of a joystick	Loading Platform	Length: 1,10 m Width: 0,70 m, tiltable
Drive Control	Forward and reverse drive directions by means of a joystick	Total Length	1,50 m
Batteries	4 x 12V dry cell batteries 110Ah each. Working autonomie ≈ 20h	Total Width	0,95 m
Battery charger	Standard equipment 10A electronically controlled. Charging time: 10 – 12 hours	Snow Plough	Length: 1,25 m, Tielbürger Quick-release system, Quick acting lock, Parallelogram-lifting, Tilttable operating unit
Driving speed	Continuously adjustable from 0 – to max. 3 km/h
